Supplementary materials

Figure S1. Normalized misfits between raw data (observed data) and the response of the model (calculated data) for electrical resistivity (panel a and b) and phase (panel c and d) for both modes (TM panel a and c; TE panel b and d), plotted in pseudosection format. Misfit sections are plotted versus site number.
**Figure S2.** Location of pre-existing geophysical investigation (Vp-section, black line, in Valoroso et al., 2011, and MT profile, grey band, in Dell'Aversana, 2003) in a sketch of Agri Valley.
