Sorry. The captions have some problems so that we re-upload them.

Fig. 1. The time series by uniform slip distribution at station 25 in different resolution of topography. Blue line is 2 minute, red line is 1 minute and yellow line is 30 arc-sec.
Fig. 2. Mw of real events and their average slips with 2 standard deviation. Open circles represent the inverse slip results in each study. Solid circles represent the mean slip of each study for same event.
